How to get all the Custom Enhancements(BADIs/User Exits/BTE) implemented for any Transaction Code in SAP?
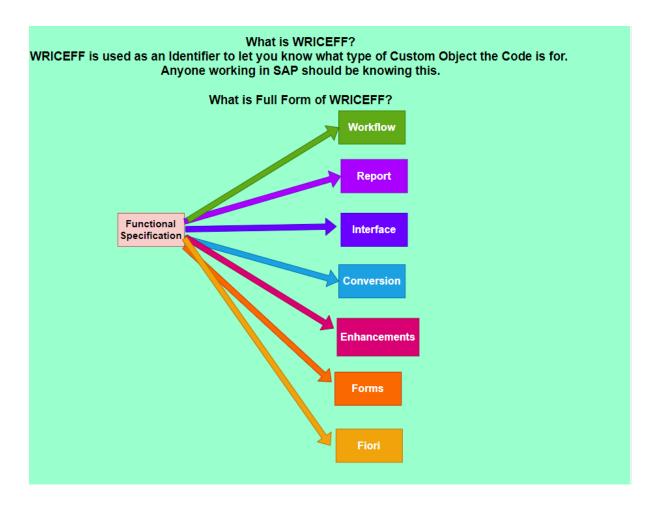

103722,570

Introduction

Most of the Projects or Companies are already using SAP and if you are working on one of them as an ABAPer or Functional Consultant it is always useful to know what are the Enhancements already Implemented in the Standard Transaction. Based on my Experience 30% of the WRICEFF objects are Enhancements hence this will help you to know what is already in the system so you can Optimize it
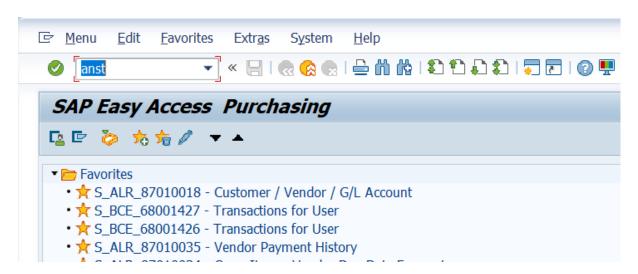

further

Solution

What is WRICEFF?

Check the below diagram and everyone needs to know what are they and the Full Form.

What is WRICEFF?
WRICEFF is used as an Identifier to let you know what type of Custom Object the Code is for.
Anyone working in SAP should be knowing this.

What is Full Form of WRICEFF?

Functional Specification → Workflow, Report, Interface, Conversion, Enhancements, Forms, Fiori
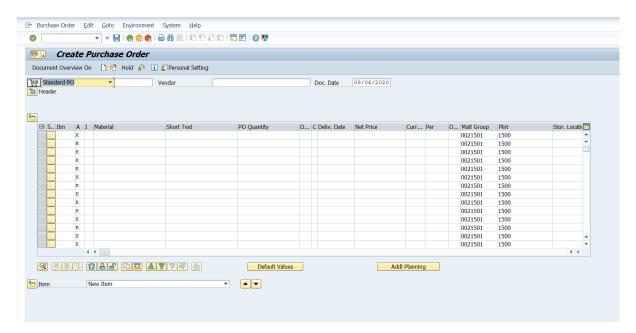

Now lets get into the SAP Enhancement Business
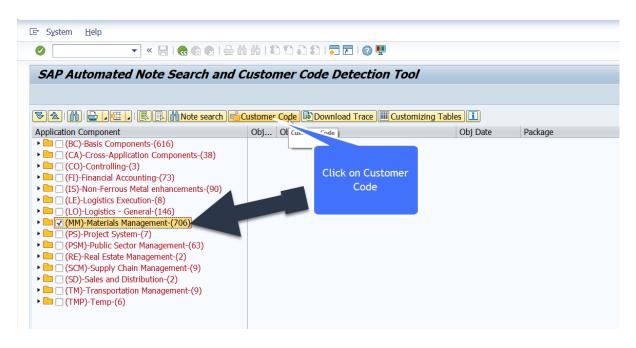

Go To Transaction Code ANST

Now enter the Transaction Code you want to check and a Description. In this case we are checking ME21N Transaction Code, Now Execute
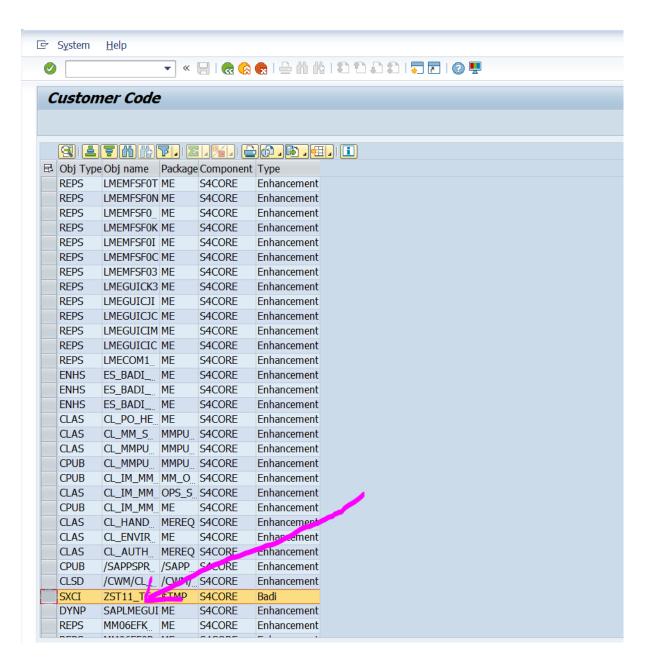

The PO Entry Screen is presented. Here I can just hit back or you can create a PO also.

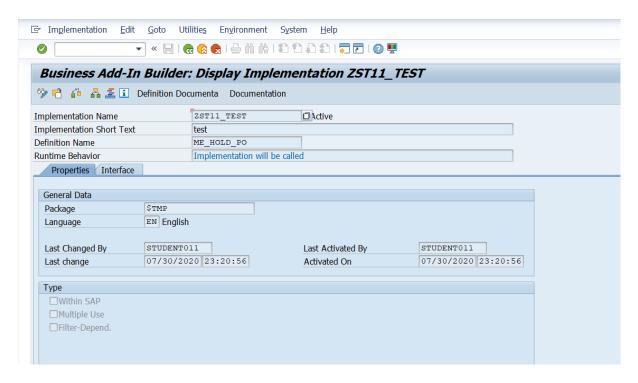

Select the appropriate Module which is Material master here and Select Customer Code.

Wala here is the Z Implementation we did

We can double click and we are in the Implementation.

Conclusion

You can use this to find SAP Enhancements.
